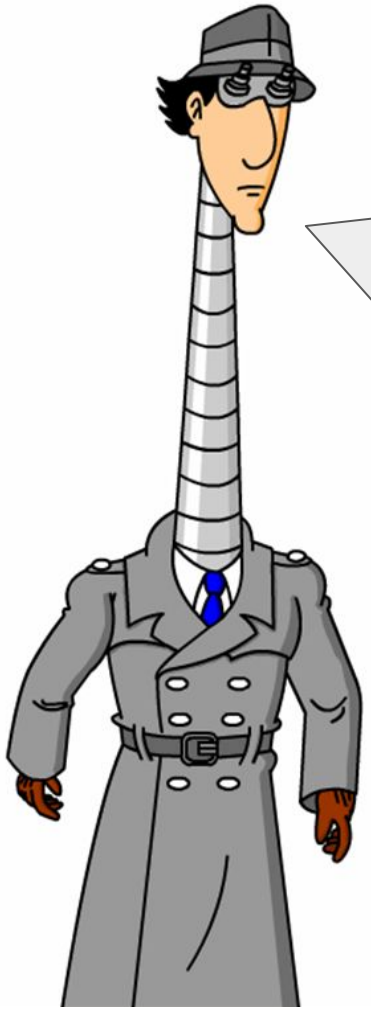
"If there is something that we do not know how to do better and cheaper than our competitors, then there is no point in doing it at all; such work we must pass on to those who will perform it with a better result»
Henry Ford in the 1930s

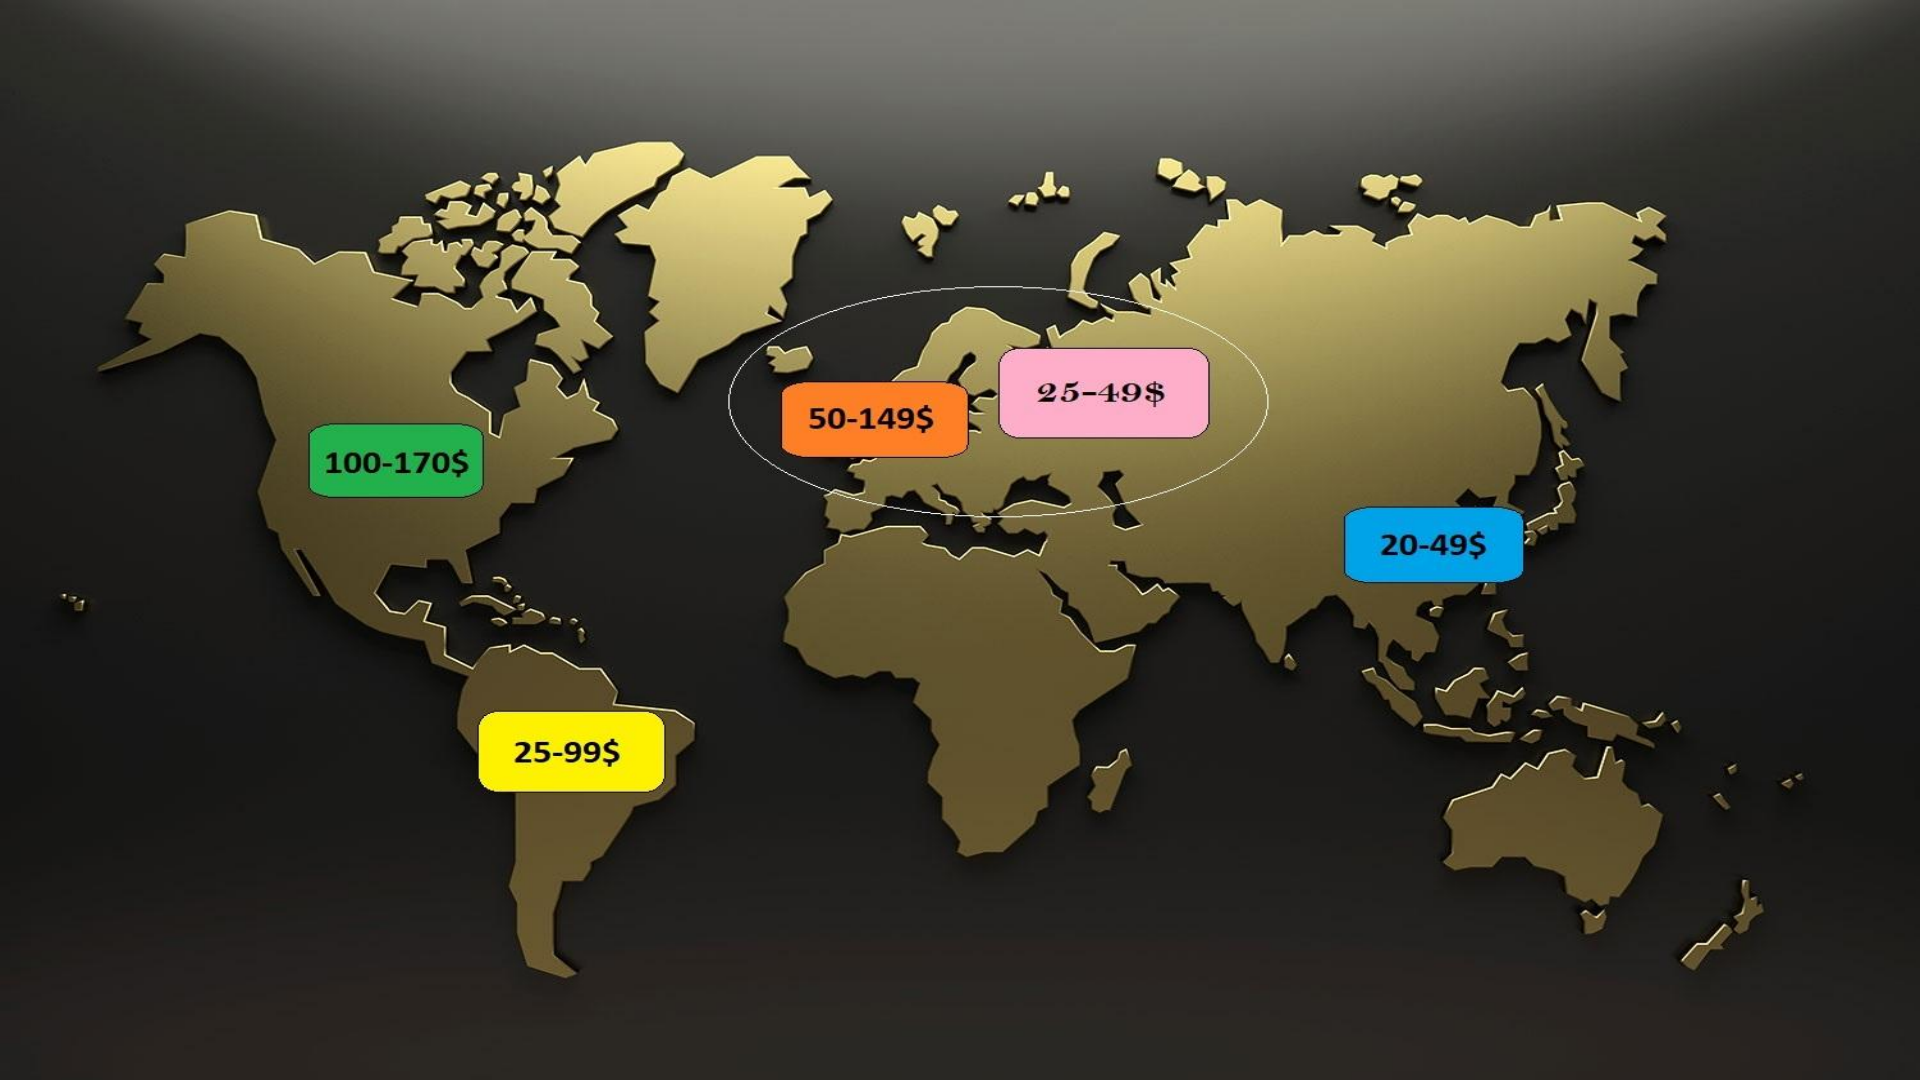
- Ok, I know what should I do, I need to find outsourcing developers. But how and where shall I search them? What about guarantee, what about their pricing?
I don't know technologies, I just need an application for my business.

Put aside the panic! -

That's meeeeee.
I can help you, Buddy.
All we need is a good outsourcing
company and I know how to find it.
We need someone with good cases.
Cases will show us their skill and their
partners, if they have good partners
they should be responsible. Also we
need good price, there is high competition on the market and we
need someone we can trust.
Let's find them.



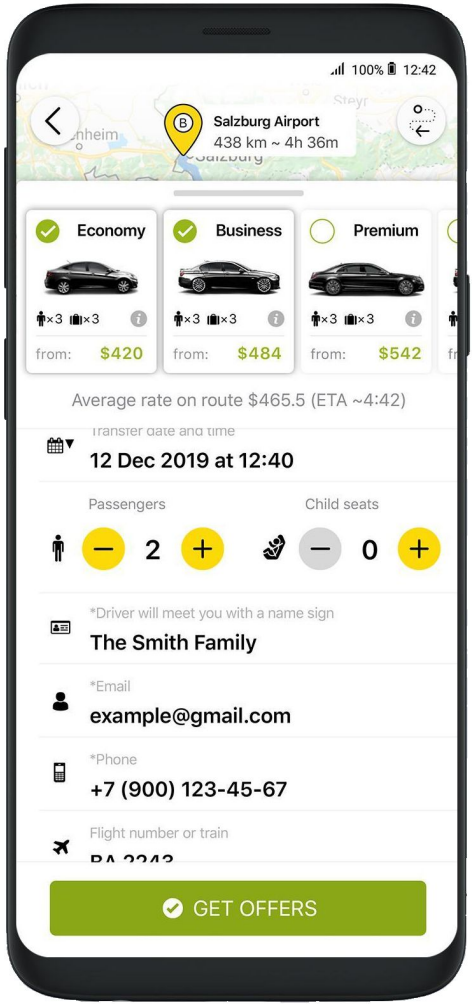
-**Step one - Research**. Outsourcing developers can be everywhere and we should check all the world. Let’s find some place who is famous for high skilled developers. Watch this…



100-170$
50-149$
25-49$
20-49$
25-99$

I noticed a good place. High technology Park in Belarus is famous for its companies.
More then 25 000 employes (developers) work there.
There are also such giants as EPAM (forbes wrote that it is one the the fast growing company), Wargaming (World of tanks), Itransition, Viber and others…By the way, you can check that price outside the Park is much higher. That's because of conditions of the Park. I think it is a good place for our tasks.

Step two. We need to find someone who is working in the “High Technology Park” because of price and skills,
who can help us with our goals,
who is interested in development and can show his cases and opportunities. I think we need someone who has good service. Good service means that company interested in their customers. Remember, the small things give us a lot of information. If company think about our goals it is good signal. I know one company there, they have good cases with large projects. Let’s check these cases...



Gettransfer.com - international marketplace of passenger transportation in business and tourism. Gettransfer was nominated as top 8 most requested startup in 2019.
Gettransfer got millions $ investment and has representation all over the world. Project GetTransfer was founded in 2015. During the three years of presence in the market, the company showed growth, and the most successful for it was 2018. GetTransfer.com, according to its own data, provided more than 240 thousand transfers worldwide, and its growth in comparison with the results of 2017 was tenfold.
KeyGroup developed and still working with that project. Keygroup also received related projects from the customer and that's awesome.

- Hi Inspector, let me show you other cases:

gettransport - International road freight service based on the marketplace, allows you to search for carriers to transport goods on a given route

getcar - Marketplace to search for commercial vehicles for rent taxi parks and taxi drivers without their car, as well as to search for personal drivers

HiveWe - Human resource managment - service for HR specialists, heads of departments and companies.
It helps to simplify the process of hiring employees to work and increase the efficiency of recruitment.

- Ok, what about stack?

Techologies

It seems that they know what they are doing, they have experience with the largest projects, and prices are below average. Need to know the process to get started...I don't want to involve in technical part, I just need to get a result. can you help me?

-Sure Inspector. First, we get you requirements for a project. We discover the peculiarities of your business and discuss your needs. Once we understand your assumptions and case scenarios, we find out developers who suits for your purposes.

When we have an understanding of your needs, we provide you with CV's of the most appropriate candidates and organize a technical interview with your specialists, where you can see if our developers satisfy you. Otherwise, we make a deep discovery of your quote and find other people to work on your project.

After the planning is done, we begin development. We hold constant meetings to report about tasks completed from the last meeting, set what we are to accomplish until the next one, and discuss our current problems.

Before shipping your project, we carry out a final user acceptance testing. When all bugs are fixed, your project is ready for launch.
