About Zignuts Technolab

Zignuts Technolab is a young creative team that brings ideas to life. We strive to excel in the invention and development of the industry's most advanced technologies including mobile apps, web, eCommerce, mCommerce, IoT, Wearables, cloud integration, cross-platform, on-demand, enterprise mobility and alike. We translate these technologies into value for our clients' customers giving them professional and best-in-class services; thereby helping businesses throughout the world harness their full potential.

Be Real:
We believe in maintaining integrity and transparency forever with our clients and our colleagues. We run our company with unquestionable ethics.

Be Accountable:
Be Accountable We take responsibility of whatever we promise to our clients and live up to their expectations. We include them in the decision process.

Passionate & Innovative:
Passion and innovation are a part of our DNA. We strive to serve businesses with solutions built with the right mix of these qualities.

Making a Difference:
With a freedom of thought and team diversity, we work towards exclusivity and changing the way products and services reach to the market.

Building compelling mobile apps for iPhone and Android. Our mobile-first approach rank us high in mobile app development companies, as we deliver complete mobility solutions that meet the needs of business, industry and end-users.

Swift	Objective-C	Android	Apple Watch	Apple TV	HTML5	Android TV	Android Gear

AngularJS	PhoneGap	React Native	Ionic	XCode 8	Java	Apple Healthkit

Cross Platform App Development:

With the existence of multiple mobile devices and multiple smartphone platforms, we've gained expertise in creating multi-platform app development solutions for both Android and iOS devices in the price of one codebase and using the same IDE, language and APIs. The various cross-platform services we provide are:
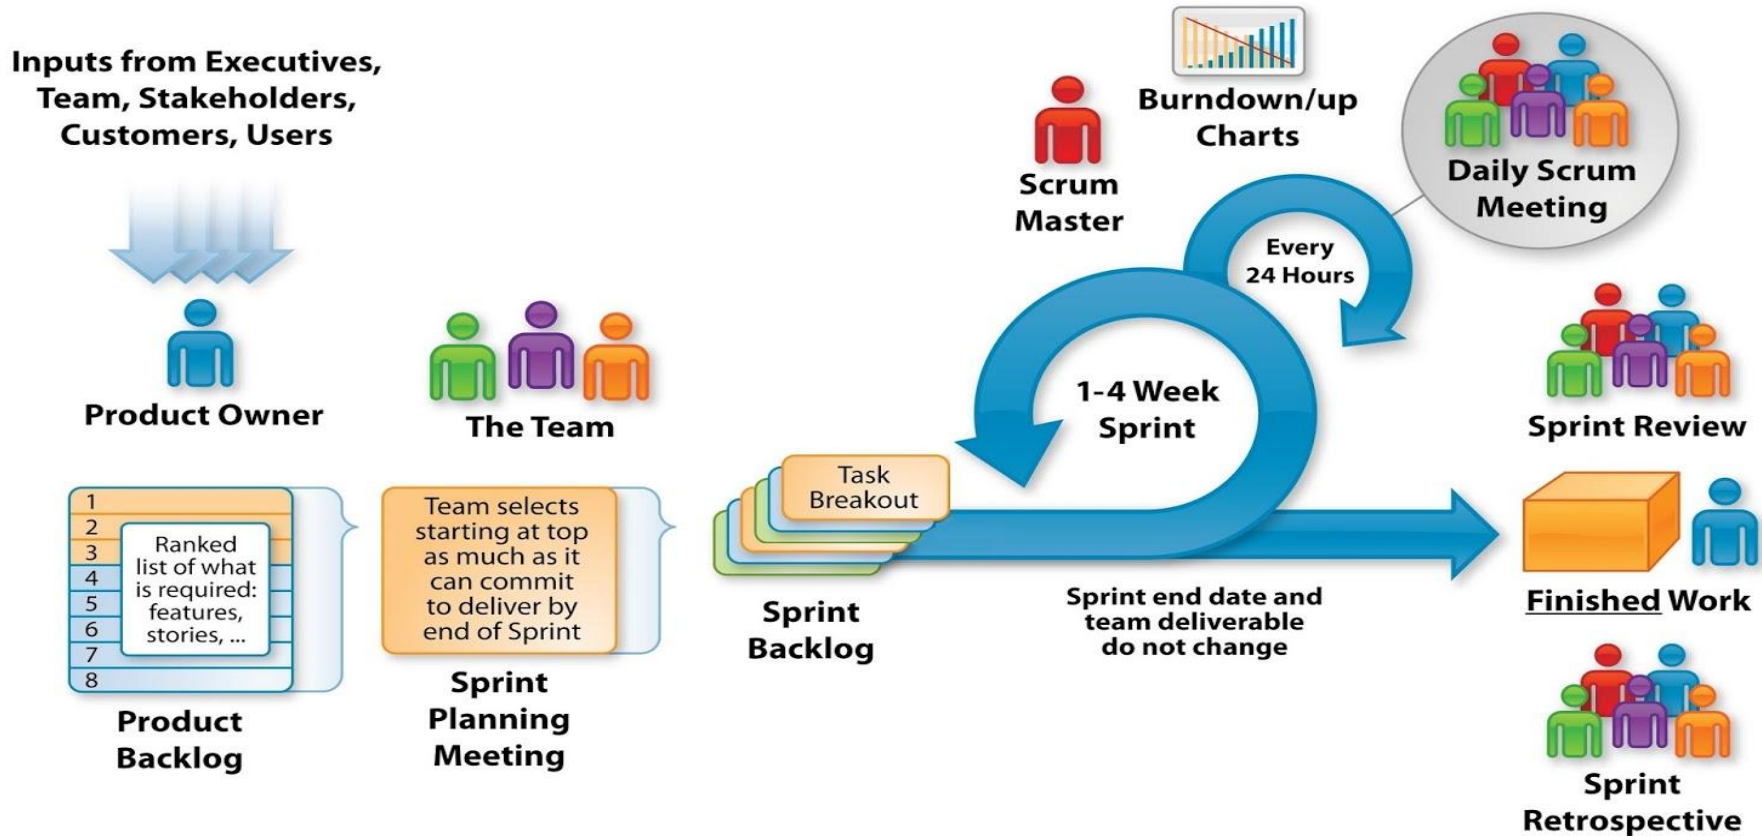

React Native	Ionic	PhoneGap	HTML5	Appcelerator

We Are Process Driven, We Follow Agile Software Development Process

Some Of Our Featured Case Studies

BizimTV - IPTV & Video On Demand

The BizimTV is an IPTV & Video On Demand Solution for android based TV. It allows you to track your favorite stations, movies and series at any time from anywhere. What you need to do is certainly no laptop, no satellite dish and no nerve-racking installations. You just need an internet connection and an Smart TV.

This was a project providing complete IPTV & Video on Demand solution with hardware integration as a part. Our client wanted to build an Android based application which could run in their set-top box, also we have to provide a Web based CMS solution which enables client to manage different user accounts and subscriptions efficiently.

The project was conceptualized, designed & developed in our technolab from scratch. The product was implemented on Android based IPTV App and extended over to the web platform as well in the form of Web based CMS system. We have also build Restful API interface to communicate between application, cms and stream providers. Also we needed to integrate payment gateways to enable users from Germany to buy subscriptions using credit card, direct bank and paypal. One of the challenging part of this project was to integrate IPTV application with Set-top box (Hardware) in a way that users get high quality user experience while running on Smart TV.

Couponicus - Easy Coupons

Couponicus makes coupon marketing as easy as never before, Determine specifying the nature of the coupon and the discount itself or fallback to a coupon our proposals. Our templates are industry-specific and performance-tested in practice.

Couponicus distribute coupons on user's website, social media Autritten and email. They need to set the various distribution channels once and then use it for all their coupons this. On their site, the coupons are integrated by means of a Widgets. This method is used for example also in the integration of YouTube videos or visitor counters. This requires the widget code to be copied only once in the HTML code of your website. If this is too complicated, we can send instructions to user's web pages maintainer for this integration will be no problem. As soon as the Java widget is integrated once any amendments thereto automatically adopted.

Join Our Happy Clients Around The World

"*In being mutual partners with Zignuts Technolab, our company now has time to concentrate on the important things and not worry who will develop portions of the internet-based ideas - BizimTV that we dream up everyday. It is hard finding a team that has the knowledge and experience to meet the needs of a project, but Zignuts has delivered the results on time. I highly recommend doing business with Zignuts Technolab, as you will be very happy with the results that they produce. They not only provides excellent service but they think outside of the box, which is a great characteristic in a company.*"

Naim Mirzada
Founder & CEO Of Deligo UG, Germany

"*We here at Couponicus are very happy with the quality of work delivered by the Zignuts Technolab team. At first we were skeptical to outsource a technical sophisticated development to India, but our skepticism was proven wrong by Gunjan and his great team. The quality of work, the reasonable pricing as well as the flexible and fair responding to additional requests during the project convinced us to continue to work with Zignuts Technolab. I can absolutely recommend anyone to work with Zignuts Technolab, you won't be disappointed.*"

Thomas C. A. Müller
Founder & CEO Of Couponicus, Germany
